not-for-profit technology solutions

Process an Entire Appeal with a Simple Interface

Direct mail fundraisers require the ability to perform complex database segmentation so they reach out to the proper prospects or previous donors for special appeals. Based on historical recency, frequency & monetary (RFM) statistics, they assign key codes to these records and may offer special premiums to entice prospects to donate a greater amount than they had previously. In addition, it's important not to ask a previous \$10 donor for a gift in excess of \$100, or ask a \$100 donor for \$10. The application also handles prospect records from outside lists that were purchased or 'rented'. These records may be imported from either the iMIS Name or Prospect tables, for those using the Acquisition Management module. Prospect records are checked against previous donors using a match code stored in major key to minimize the possibility of duplicate mailings. Mailings are personalized and in many cases sent to an outside vendor for processing.

Direct Mail in iMIS? We Make It Easy!

By maintaining stored procedures that were used to select records for previous appeals, this application provides an organization with a user interface to:

- Process an entire appeal, from record selection to n'th naming
- Adding 'decoy' records
- Creating MAILING activities in iMIS
- Creating the export file

iMIS DIRECT MAIL FUNDRAISING SELECTION

PLEASE SELECT ACTIVITY MAILINGS TO CREATE!
